

ARUM LILY BLITZ

Looking for a contractor to do your arum lily spraying?

The following contractors are experienced, thorough and careful to minimise damage to native vegetation and the environment.

Where the arum lily on your property is scattered among native vegetation the best option is likely to be a spray contractor using backpack spray equipment. Where the arum lily infestation is an area without native vegetation the most efficient control method will be using a large tank with pressure pump and hose.

| Company | Contact person | Phone | Email | Services |
|---|----------------|--------------|---|--|
